PREMIUM ARCHITECTURAL LIGHTING SOLUTIONS

ABOUT US

LAFIT LIGHTING is one of the leading manufacturers in the architectural LED lighting market, featuring a comprehensive catalogue of proven quality, high-reliability lighting fixtures capable of offering industry professionals the most innovative and alternative solutions at all times.

A full range of acclaimed architectural lighting products.

We are proud to be an example of the MADE IN INDIA branding, with a flair for innovation and a profound appreciation of the architectural project. For the last two decades, we have been unstoppable, always focussed on realizing new technical objectives and increasing product performance, with particular attention on our human capital, a team of highly trained, motivated people.

Lafit lighting always involves more resources in Research, Innovation & Design. The products studied and designed at the Research & Development centre by experts are subjected to constant and meticulous Quality.

Our products can meet the multiple needs of the architectural and

Latest Technology

The company's manufacturing plant is located in the fast developing industrial area of Vasai & Bhiwandi. Spread across an area of 25000 sq. ft., it is thoughtfully designed to accommodate the different manufacturing processes while ensuring that every process smoothly synchronizes with the other and there is optimum utilization of time and resources.

The plant is equipped with some of the latest and finest machinery imported from USA, Japan, Italy, Taiwan and China

Advanced R&D Facility

The manufacturing facility also has a well-equipped and highly efficient R&D department. Our R&D team is relentlessly engaged in bettering our current product range through examinations and observations. Any changes in engineering which impact overall performance and productivity are promptly checked and recorded. Further, they also play an instrumental role in shaping our future portfolio through constant monitoring of market trends and customer feedback.

Highly Skilled & Qualified Staff

We have a team of highly skilled and qualified professionals with vast experience.

Our team comprises engineers for design, production, QC, and QA. Our team leaders, who head their respective departments, possess considerable in-depth knowledge of the process and its functioning. Further, we also have a team of highly skilled and experienced technical and support staff who are multi-trained to overlook operations and support with maximum fluency and accuracy.

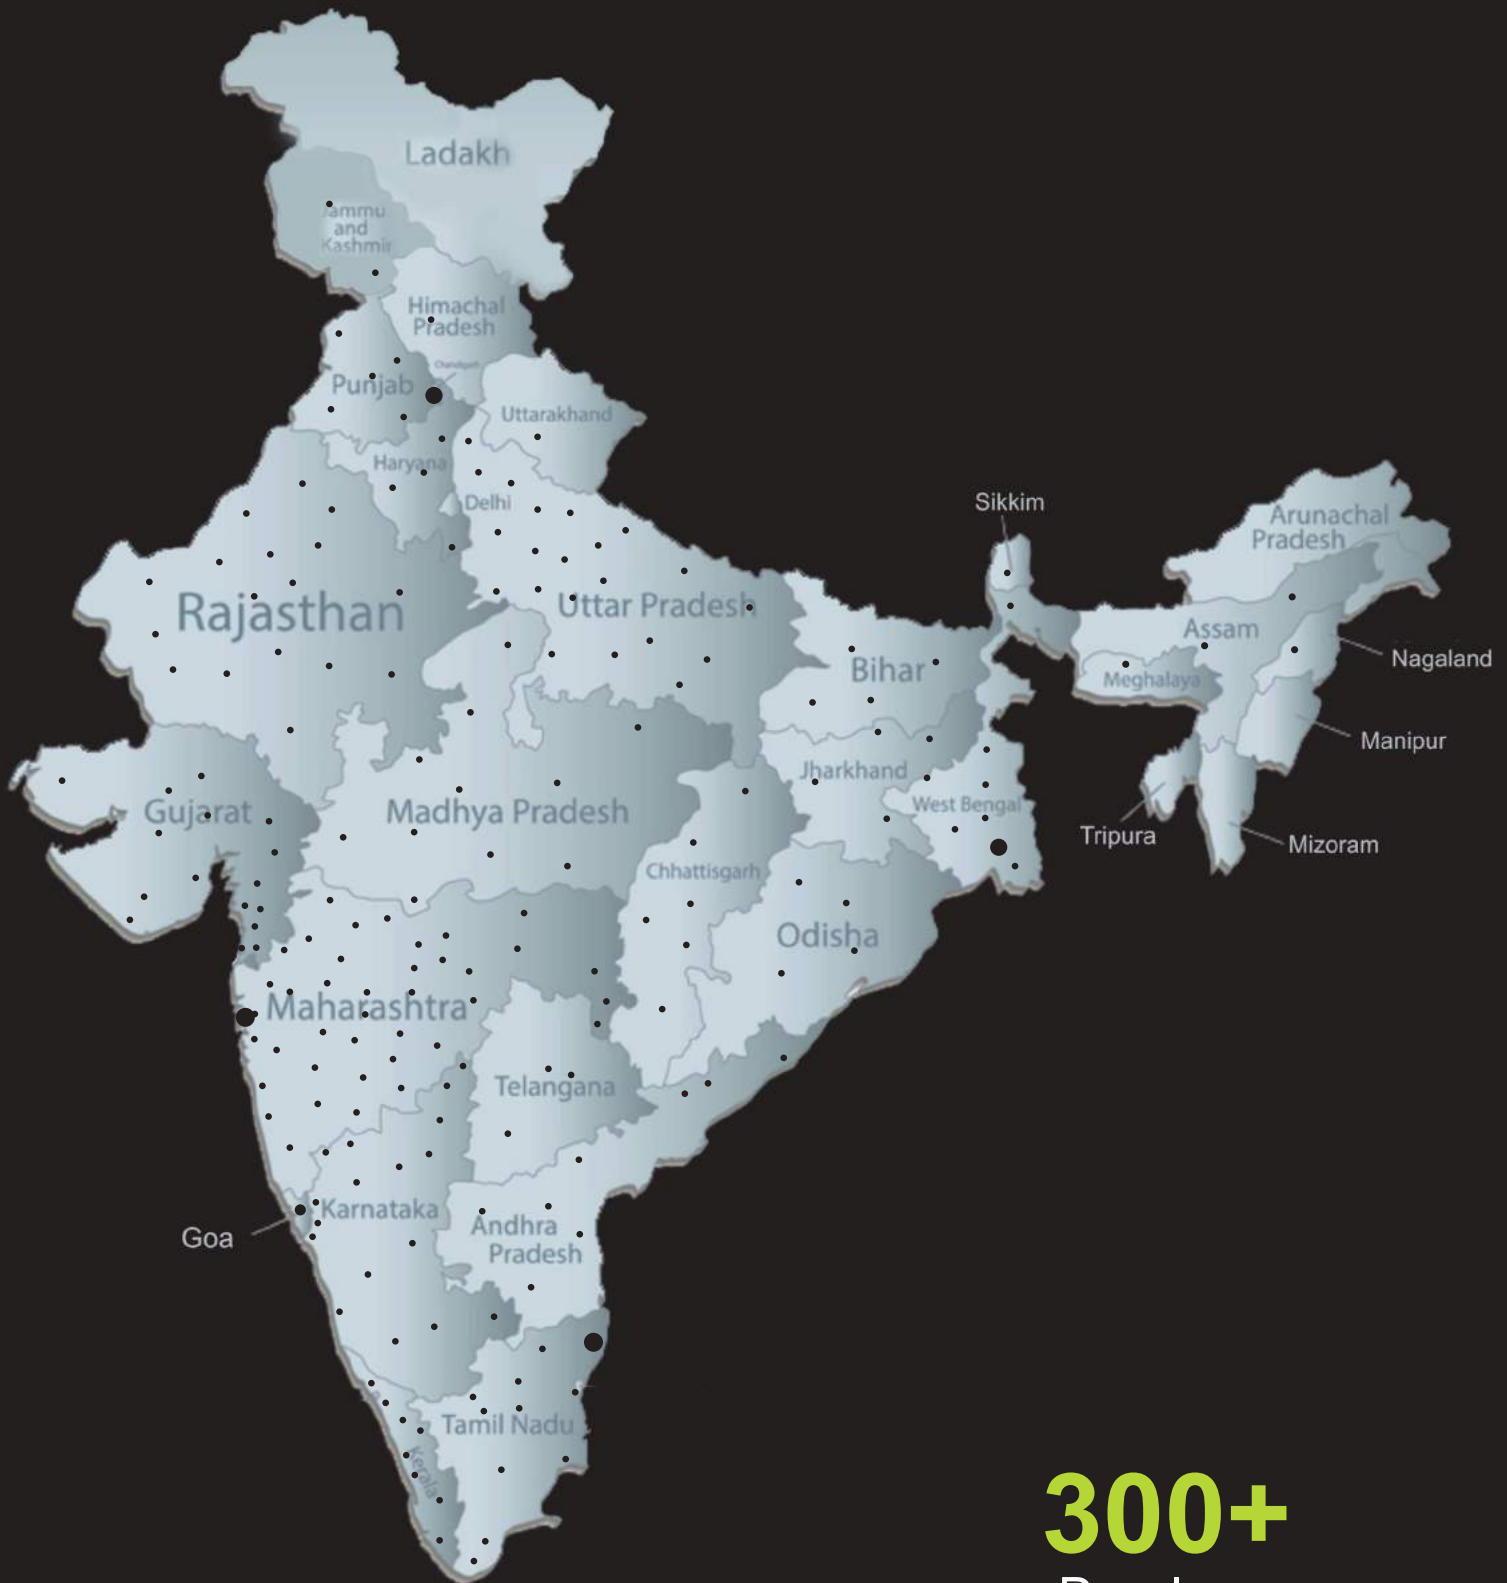

Large Warehouse Facility

We have a well-equipped and professionally managed warehouse facility in Bhiwandi. Being located in the biggest warehousing and transport hub, it is also located at strategically convenient and comparatively close proximity to our manufacturing plant. (Our manufacturing facility & warehouse are the same.) This makes it the most viable location in terms of speed in mobility and cost effectiveness to deliver products within minimum lead-time and at exceptionally competitive prices.

Quality

Quality control at Lafit is not a one-step process

Our Presence

300+
Dealers
Throughout India

THE
SMART **NEXT**

THE SMART **NEXT**

Smart lighting for a reason
From smart light to smart control.
With **SMARTNEXT** you are able to
manage lighting from your
smart device.
Transforming technology in a
"Smart" way.

WHY SMART NEXT ?

For decades, architects, designers, and builders have looked at how to improve aspects of our home & work environment, be it through technology, or functional design. And for the past few decades we have seen an explosion of innovation in residential & workplace technology from the personal computer, cell phone, Internet, and lighting. These advances have helped people be more efficient. But what if we could add a new axis of innovation to the environment? What if in addition to improving the tools in our spaces, we could also improve the productivity of people and at the same time increase efficiency?

Introducing **SMARTNEXT** which functions in sync with the Circadian lighting system. Circadian lighting is the concept that electric light can be used to support human health by minimizing the effect of electric light on the Human circadian rhythm.

Smart Lighting Functionality

The Lafit Lighting control solution provides for all the control that are expected from a full featured professional lighting control solution.

There are 4 primary nutrients that the human body needs :

1. Food
2. Water
3. Oxygen
4. Light

Did you know that your human body is designed to follow a systemic rhythm where every function from the beating of the heart to the breathing of the lungs was meant to function in sync with the environment.

This system or rhythm, commonly referred to as the Circadian rhythm is based on the light perception that occurs in our system.

With the invention of artificial lights in the 19th century, soon our system started perceiving night as day and that in turn played a massive role in disrupting our health.

THE IMPACT OF HUMAN CENTRIC LIGHTING :

- ▶ INCREASED ALERTNESS IN THE MORNING.
- ▶ PRODUCTIVITY AND CONCENTRATION IMPROVEMENTS.
- ▶ IMPROVED MOODS.
- ▶ REDUCED HYPERACTIVITY.
- ▶ REDUCTION IN ERRORS AND ACCIDENTS.
- ▶ FASTER COGNITIVE PROCESSING.
- ▶ IMPROVED SLEEP.
- ▶ SAVES MONEY AND THE ENVIRONMENT.
- ▶ BETTER VISUAL ACTIVITY.

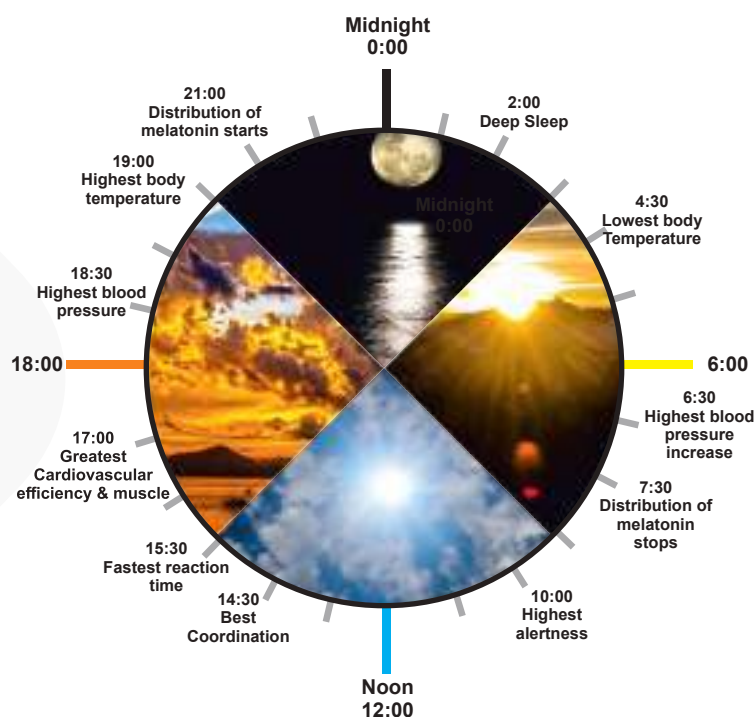

BETTER FUNCTIONALITIES

HUMAN CENTRIC LIGHTING

Also known as circadian rhythm lighting, signals the brain through the photoreceptors in the eye and gives the impression of the shifting colors and intensities of the rising and setting sun. What kind of light does an occupant need to perform at optimum levels on an hour to hour basis?

Task tuning is a feature of advanced lighting controls, and human-centric lighting takes this to the next level. Advanced lighting controls using tunable LED lighting that includes color is now driving human physiological responses in a number of important ways.

Exposure to bright, blue-rich white light during the midday and warmer colors during the early morning and late afternoon/ early evening can drive energy and alertness or a calming sleep inducing effect. Disrupting circadian rhythms can contribute to poor night time sleep, increased daytime napping, and greater risk of depression, obesity, diabetes, and seasonal affective disorder. Corporate office buildings, hospitals, and even schools are beginning to see the productivity and other benefits of incorporating human-centric lighting into their environments.

Morning light spectrum

Evening light spectrum

REACTIONS OF THE BIORHYTHM TO DAYLIGHT For people with normal working & rest periods

THE SMART *NEXT*

With the use of sensor technology, wireless communications, adaptive controls, and software applications, human centric smart lighting systems are environmentally aware and intuitively controllable. Integration with third-party building automation systems and web-based IoT services brings interoperability to HCL systems for vastly improved lighting control, user interaction, energy efficiency as well as automated lighting calibration with the 24-hour biological cycle.

CIRCADIAN

It's a technology that best imitates sunlight.

Thanks to the use of modern LEDs and the proper configuration of blue light emission, it affects the stimulation or suppression of melatonin release. Therefore, it either gives people energy or helps them wind down and fall asleep, supporting the natural human circadian rhythm.

ENERGY IN THE MORNING

4000K white + blue-enriched

HAPPINESS AT MIDDAY

4000K - 3000K white

RELAXATION IN THE EVENING

3000K - 2700K white

THE SMART NEXT

DAYLIGHT- A NATURAL REGULATOR

Human activity functions according to a rhythm determined by nature. Until the invention of artificial lighting, it was the sun that decided about people's daily activities by waking them up at sunrise and indicating that it was time to rest at sunset.

Evolution has forced a rhythm upon us that divides the day into two parts. We spend 16 hours being active, and the remaining 8 hours resting. This daily activity pattern is determined not only by practicality. Scientific studies prove that a dependency of a chemical nature also exists. Light not only helps us to discover the images coming from the world that surrounds us. It regulates sleep, participates in the absorption and production of vitamins, and takes care of proper hormonal management. What's important, daylight directly affects people's moods and well-being.

In 2001, it was discovered that the eye has three types of photoreceptors, and not two, as had been previously thought: cones and rods. This discovery revolutionized the perception of the significance of the light spectrum and how it affects humans. As it turned out, this third receptor (the ipRGC photoreceptor) is particularly sensitive to a narrow range of blue light, which is most abundant in natural sunlight in the morning and decreases during the day.

➤ When the light enters the eye.

➤ Through the hypothalamus it regulates the circadian rhythm with the help of chemical messengers that include cortisol, serotonin & melatonin.

➤ A regulated circadian rhythm has positive psychological & physiological impacts on you.

HUMAN-CENTRIC LIGHTING IS THE NEXT STEP IN LED DESIGN AND CONTROL

LED-based human-centric lighting is controllable and tunable across a spectrum of correlated color temperatures (CCTs) to evoke particular human biological responses and behavior in well-designed indoor environments.

HUMAN-CENTRIC LIGHTING AT WORK.

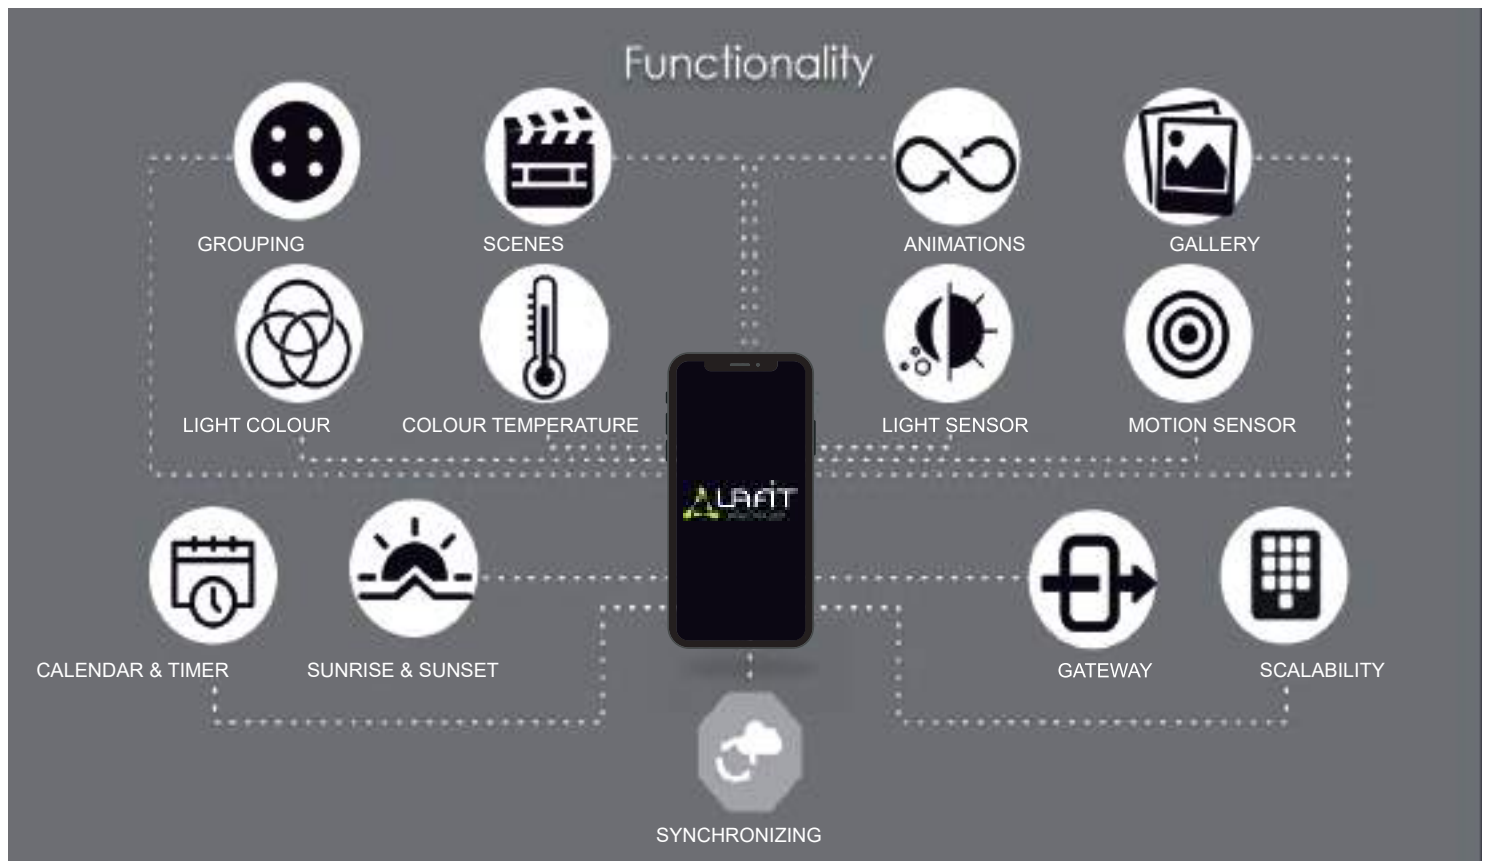

Using tunable LEDs in this manner is known as human-centric lighting (HCL), and it offers many potential advantages in offices and workspaces. Research is underway into the potential emotional and biological outcomes of lighting that mimics the changes in color temperatures found in natural daylight.

THE FUTURE IS SMART NEXT

The reality is that all light is not created equal. Just as with other products or technologies, there are varying degrees of quality. People will begin to encounter HCL more, and they will soon come to expect it in the spaces where they spend prolonged amounts of time. That means new construction will soon demand this option in the design and specification stage. Also, retrofit opportunities must be available to existing buildings.

The functionalities of this technology are more than merrier. The next page will help you to understand what all it can offer to make your life even more productive and easy at the same time.

THE SMART **NEXT**

Grouping

Grouping luminaires in the Lafit app is very easy. Grouping works with the same gestures as grouping apps in your smart device. After grouping, all the luminaires in the group can be controlled all together or the group can be opened for individual control.

Animations

Animations are dynamic scenes, where it is possible for the lighting to fade from one scene to another scene. Animations can be recalled to cycle through different lighting situations once or they can be set on repeat. The duration of each scene and the fade times between scenes can be set.

Scenes

Different lighting situations for different occasions can be created. It is possible to control multiple luminaires with one tap to create the perfect ambience for different occasions and needs. One luminaire can be used in several scenes.

Circadian Control

The lighting control solution shall have the capability of controlling the colour temperature of tuneable white luminaires based on day time as well as the ability to automatically change the colour temperature management for regular scenes by using a response graph that spans the hours of day on horizontal axis and colour temperature on vertical axis.

Any user shall have access to the circadian control curve from the App and to be able to modify the curve, by easy App gestures, according to individual needs.

THE SMART **NEXT**

No Gateway

Bluetooth Low Energy is already implemented in smartphones, tablets and smart watches. This means that the communication from a smart device to the lighting control solution shall not require any kind of gateway or dongle.

App

The lighting control solution shall offer a big variety of possibilities for a user to interact with the lighting depending on the user's individual requirements. An App for smartphones, tablets and smartwatches is the most elaborated user interface. It shall be possible to download the App, with all the functionality specified for the project, for both iOS and Android devices, from relevant App stores.

Network Sharing

As a consideration of the system setup, the network sharing is a decision that is to be made at the beginning of the process, to ensure a straightforward commissioning phase and the best possible network security.

The network shall have 4 different sharing options, that can be chosen and modified directly from the App.

Network

The lighting control solution is based on a network structure. All luminaires and lighting control devices are paired to networks. 250 units can be paired to one network. The amount of networks does not have to be considered.

Security

The network (communication from mobile devices to the lighting control units and from the units to the cloud and server) shall be an own, closed network. Local building networks shall not be accessed. The cloud shall require Log In and Password, that allows an access token to a local "Bluetooth network".

SIMULATION OF DAYLIGHT

The characteristics of the Human Centric Lighting illumination consider more than just vision. The focus is on the person. Human Centric Lighting stimulates the well-being and supports stable health of the person.

THE
SMART **NEXT**

DELIVERING NEXT

THE SOLUTION FOR HUMAN CENTRIC LIGHTING

THE SMART **NEXT**

Light colour

LaFit offers a comprehensive color controlling possibility. A luminaire manufacturer can define the limits of the LaFit Ready luminaire's color range beforehand. A user can change the color in a simple manner from the app and also save his/her favorite colors in a color palette.

Calendar & timer

With the calendar and timer functionality scenes and animations can be turned on and off based on a convenient time, date or certain weekdays to fit users' needs, seasons and different activities. All the LaFit units keep track of time.

Sunrise & Sunset

LaFit units are able to calculate the local sunrise and sunset times, provided that the network's time zone and location are set. When the location is requested the application is temporarily using GPS to retrieve the current location of the mobile device.

Colour temperature

LaFit offers a comprehensive colour temperature control. A luminaire manufacturer can define the limits of the LaFit ready Tunable White luminaire beforehand so it appears with the correct levels in the LaFit App. A user can change in a simple manner the colour temperature for the luminaire just by sliding the finger on top of a luminaire icon.

Gallery

The lighting control solution shall include a functionality to control lighting directly from a picture in the App. The functionality shall be flexible and permit the user to choose any kind of picture like a real photograph of the space, a floor plan or a render. It shall be possible to control lighting from the chosen picture with easy App gestures. Several pictures can be added.

Remote Access

A network can have a single iOS/Android device working as a gateway. Other devices having access privileges to the same network can connect via the cloud to the network when not on the same physical location of the network. One iOS device can be a gateway for 4 networks and one Android device can be the gateway for 1-4 networks, depending on the Android device. The amounts of networks are iOS/Android restrictions and not depending on the lighting control solution technology.

Apple watch

The lighting control solution shall enable lighting control via Apple Watches. From an Apple Watch, luminaires can be turned on and turned off, a scene or an animation can be recalled and dimming can be done by rotating the digital crown. In the watch window 'all lamps' and 3 first scenes can be seen.

THE SMART NEXT

KEY FACTORS

- Bluetooth Low Energy, wireless.
- Any smartphone or tablet in the world support BLE technology.
- Mesh peer-to-peer communication.
- Mesh network range : 30 m range indoor, 50 m range outdoor. (Without obstacle)
- 250 smart modules in one network with an end number of networks can be created at one site.
- Each Lafit Bluetooth unit works as amplifier/repeater.
- No servers, no software licenses, no IT structure needed.
- Firmware updates over the air.
- 100% Safe & Secure for your mobile data.
- Secure communication: AES-128, (+ECDH and ECDSA), cryptography in the BLE level and Secure https communication between smartphone and the cloud.
- No VPN/gateway needed for remote control.
- Easy, user friendly app-interface.
- Five levels of security/users.
- Compatible with standards: DALI,
- 0/10V Analog, 1/10V Analog and trailing edge.
- No single point of failure, no need of HUB/Router's.
- Self repairing: each Lafit Bluetooth module stores a backup of all Lafit Bluetooth module in the network.
- Restore/auto backup of the failure units.
- Unlimited number of networks.
- Cloud supported. No need for local backup.
- Data harvesting and Cloud/API interface for IoT.
- Our Brillo range products, are 100% compatible with app & all products are configured and used with the Casambi App, available for both iOS & Android.

MARBUL PLUS

Magnetic track lights have created a revolution in lighting design. Lafit Lighting brings you the minimal and beautifully designed, low voltage multipurpose system with various solutions including spotlights, pendants, and linear lighting. It can be installed both vertically and horizontally and has recessed, surface, and hanging versions. Low voltage offers designers plenty of freedom, as it can illuminate versatile spaces. By adjusting and moving the light points, they can be adopted to changing lighting requirements. The variable and flexible lighting design smartly makes use of your space and creates an exhilarating experience.

ANGEL PLUS

A collection of minimalist and elegant design lighting products for all your lighting needs. Angel Plus creates a graceful and exquisite lighting atmosphere that is both unique and expressive, particularly when illuminated, the interior colours contrast with the exterior finish to reveal all their beauty. Also available in Trimless design, its sleek, invisible and merges with the ceiling making the room appear bigger and spacious. Angel Plus range is suitable for planning solutions for high-end residences, and retail outlets, lobbies, hotels, museums, and wherever representative, stylish premium lighting solutions technology is required.
